Collatz Stained Glass:

Application of Voronoi Tessellation in a Binary Logarithmic Spiral Space

Hiroshi Harada – April 6, 2026

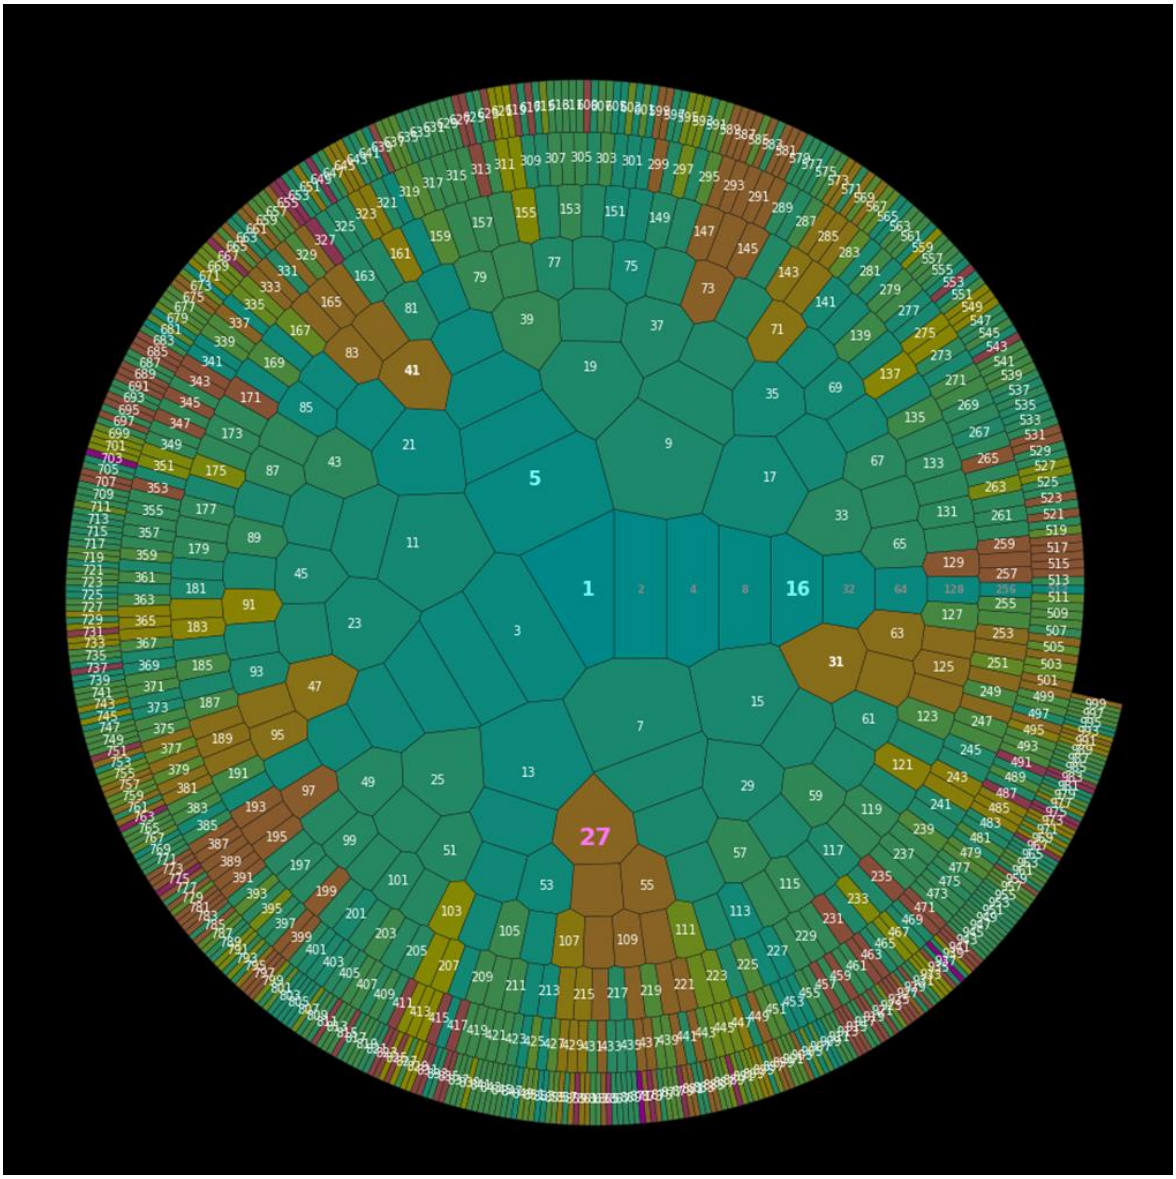

Figure 1: The Collatz Stained Glass (N = 1000).
A Voronoi tessellation of the reverse Collatz tree mapped onto a binary logarithmic spiral space.
Cell colors represent the Total Stopping Time, transitioning from Cyan (early stage) to Yellow (intermediate), and Magenta (late stage; e.g., 27, 31, 41).
This visualization demonstrates a dense packing pattern approaching a Hausdorff dimension of $D_H \approx 1.0$.
